ANALYSIS**

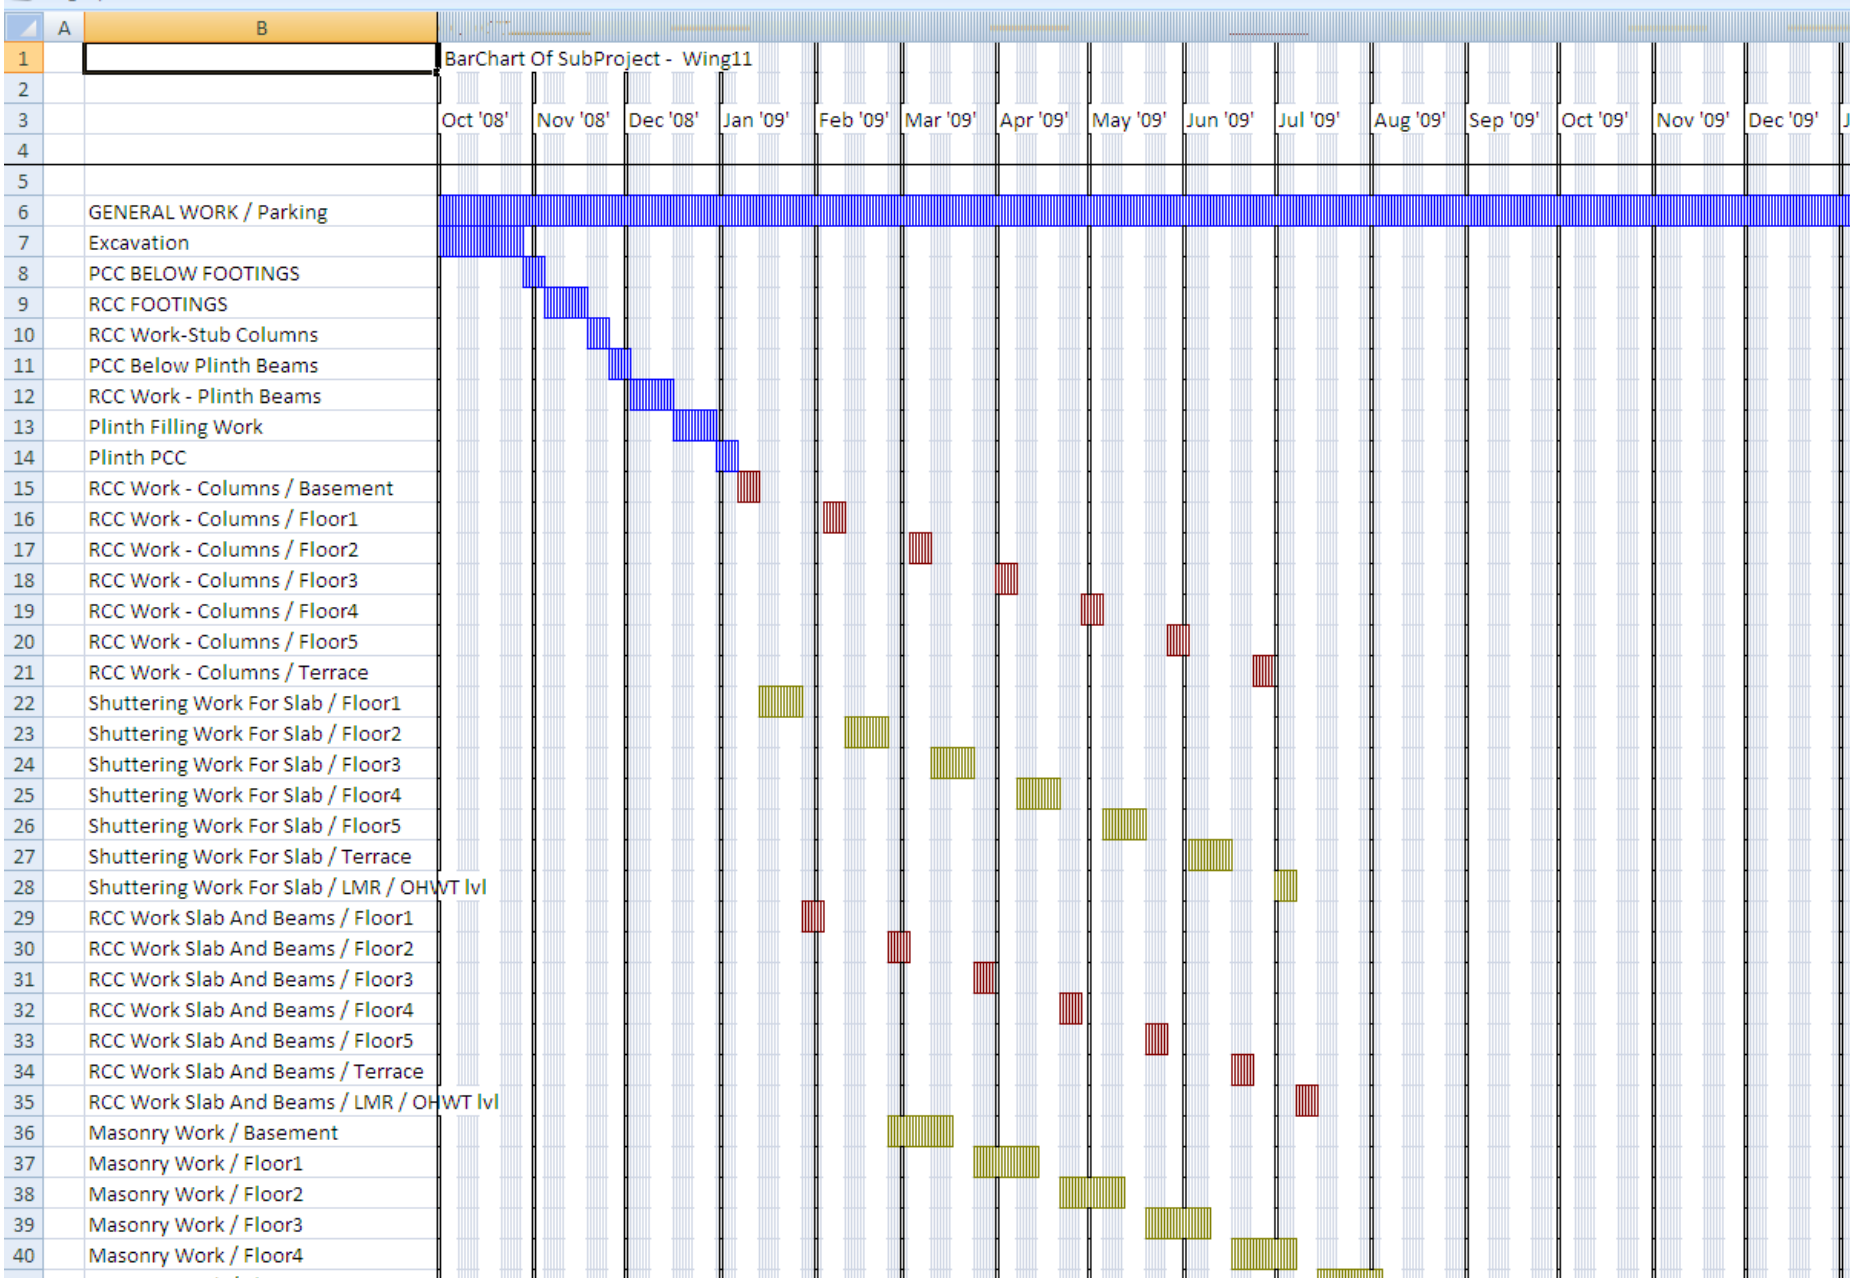

Introducing Constrosoft

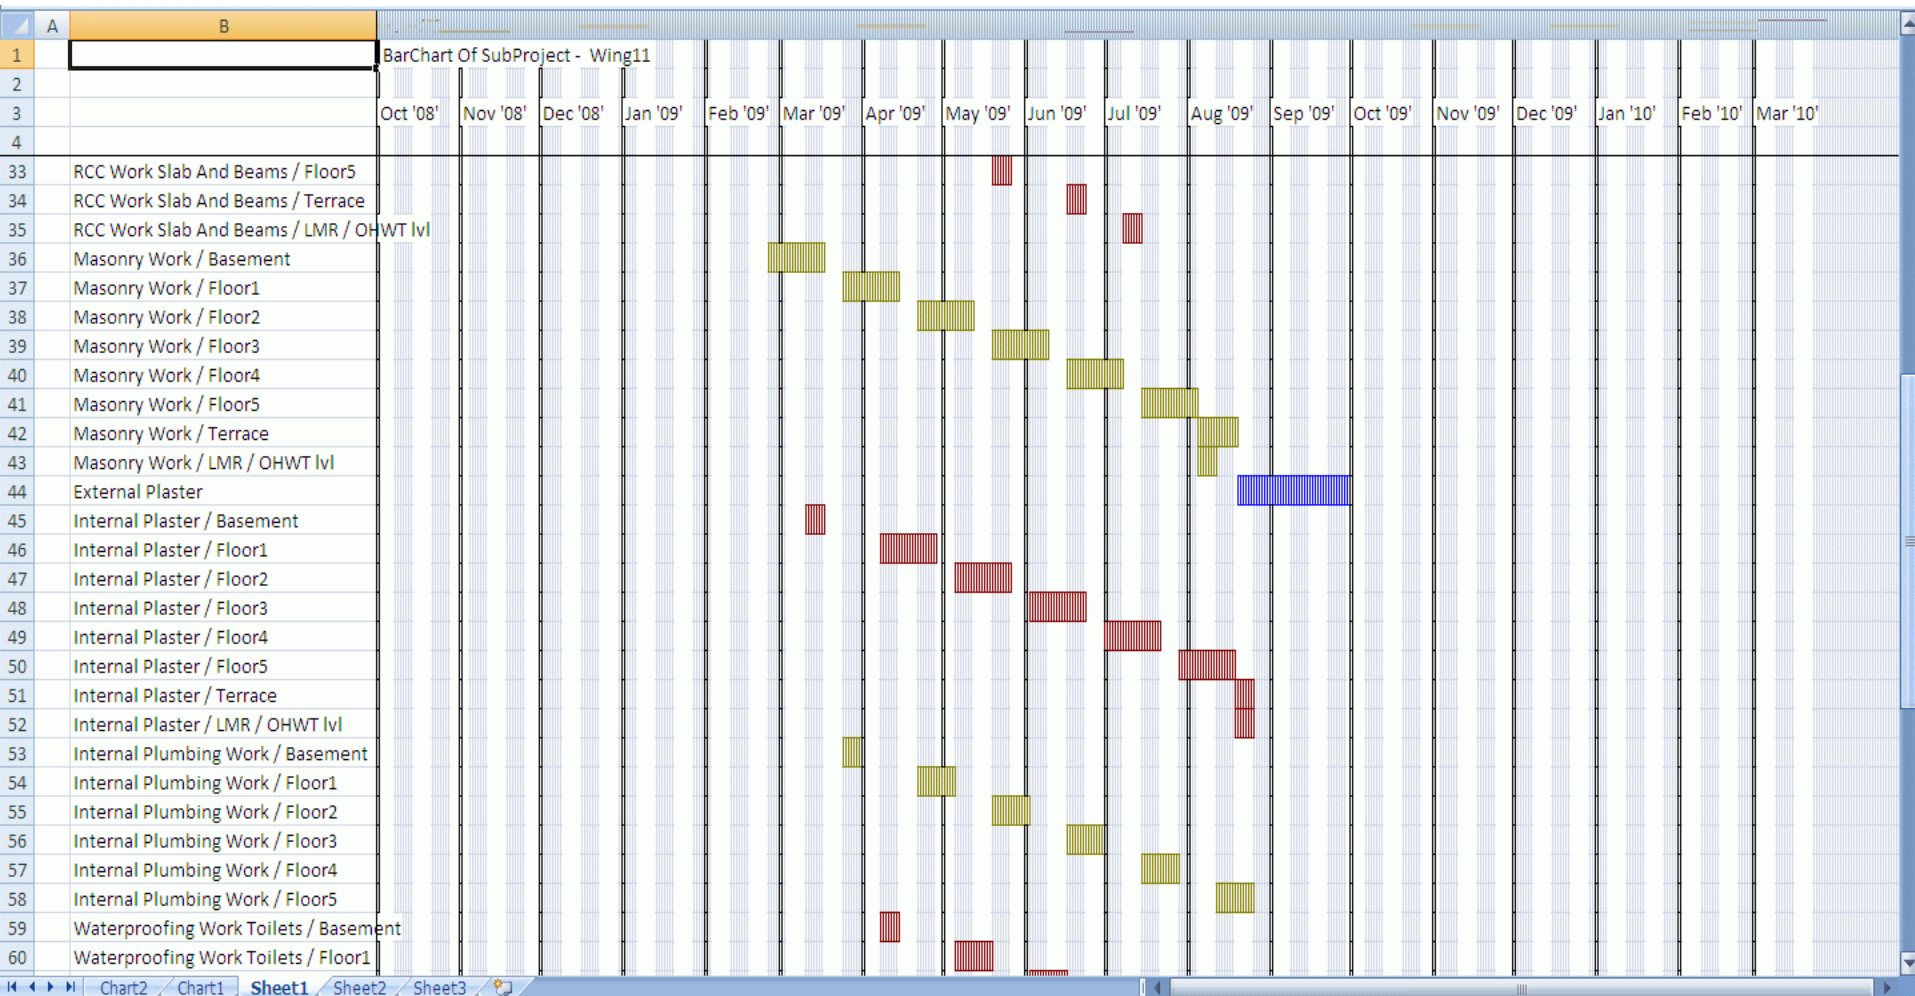

Constrosoft

Management Reports

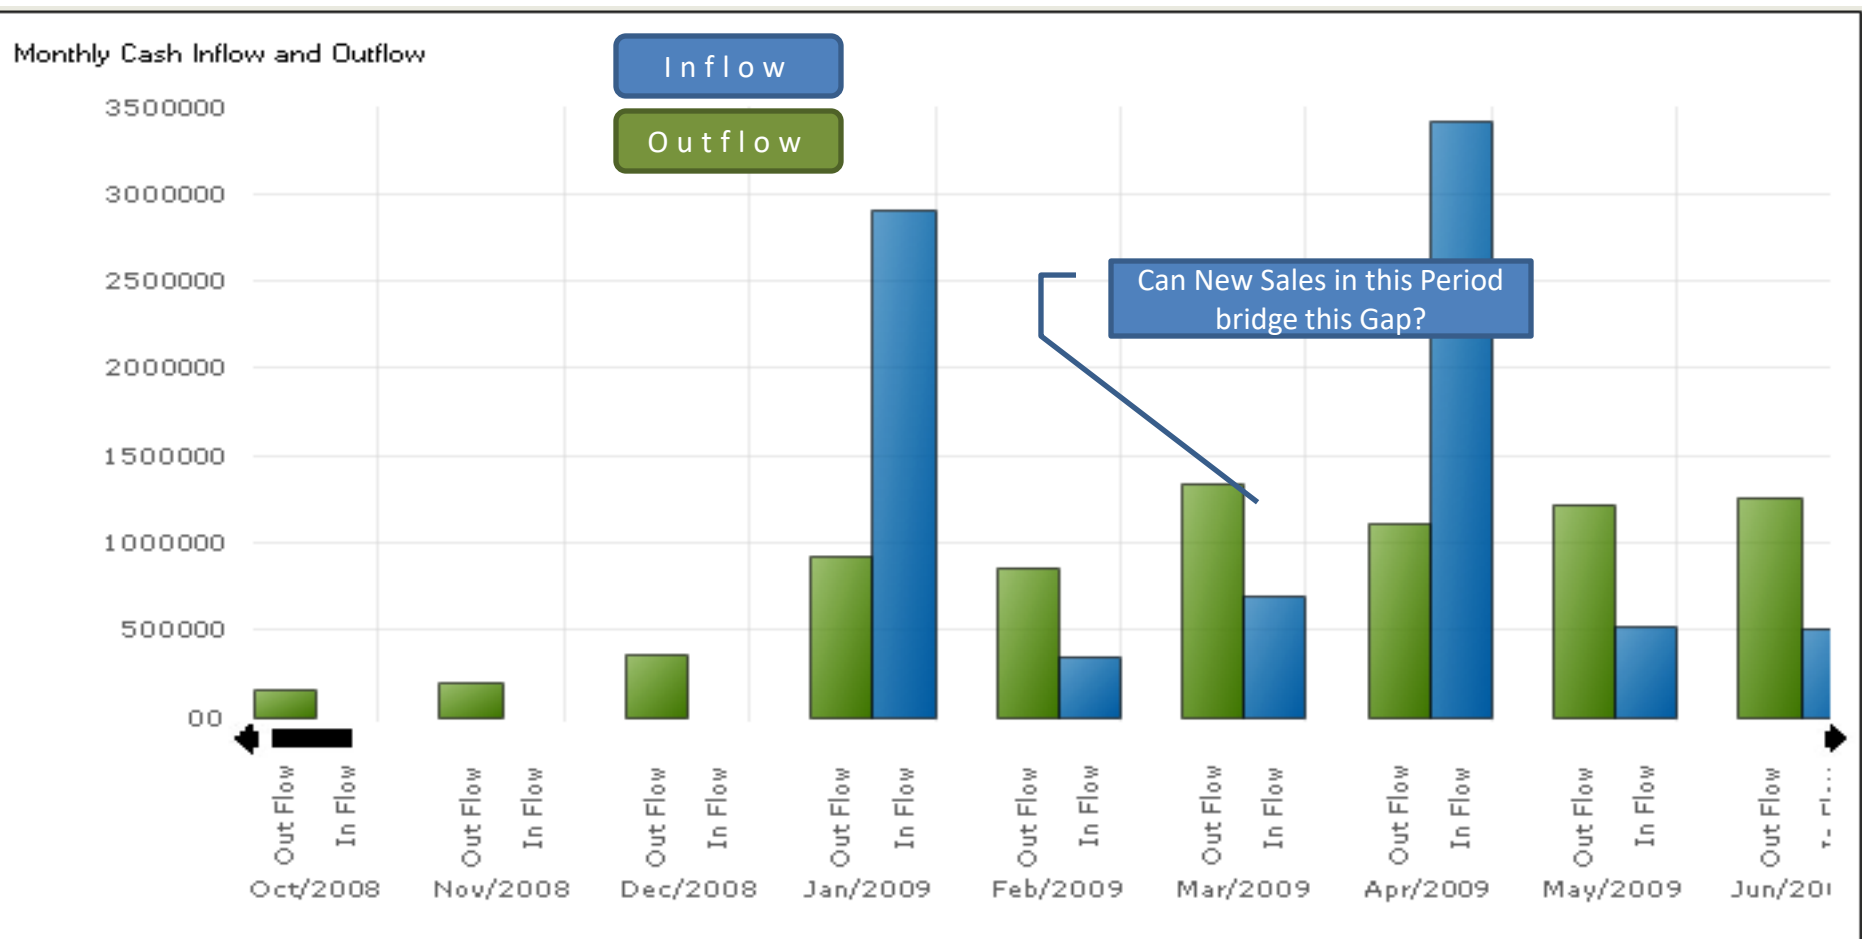

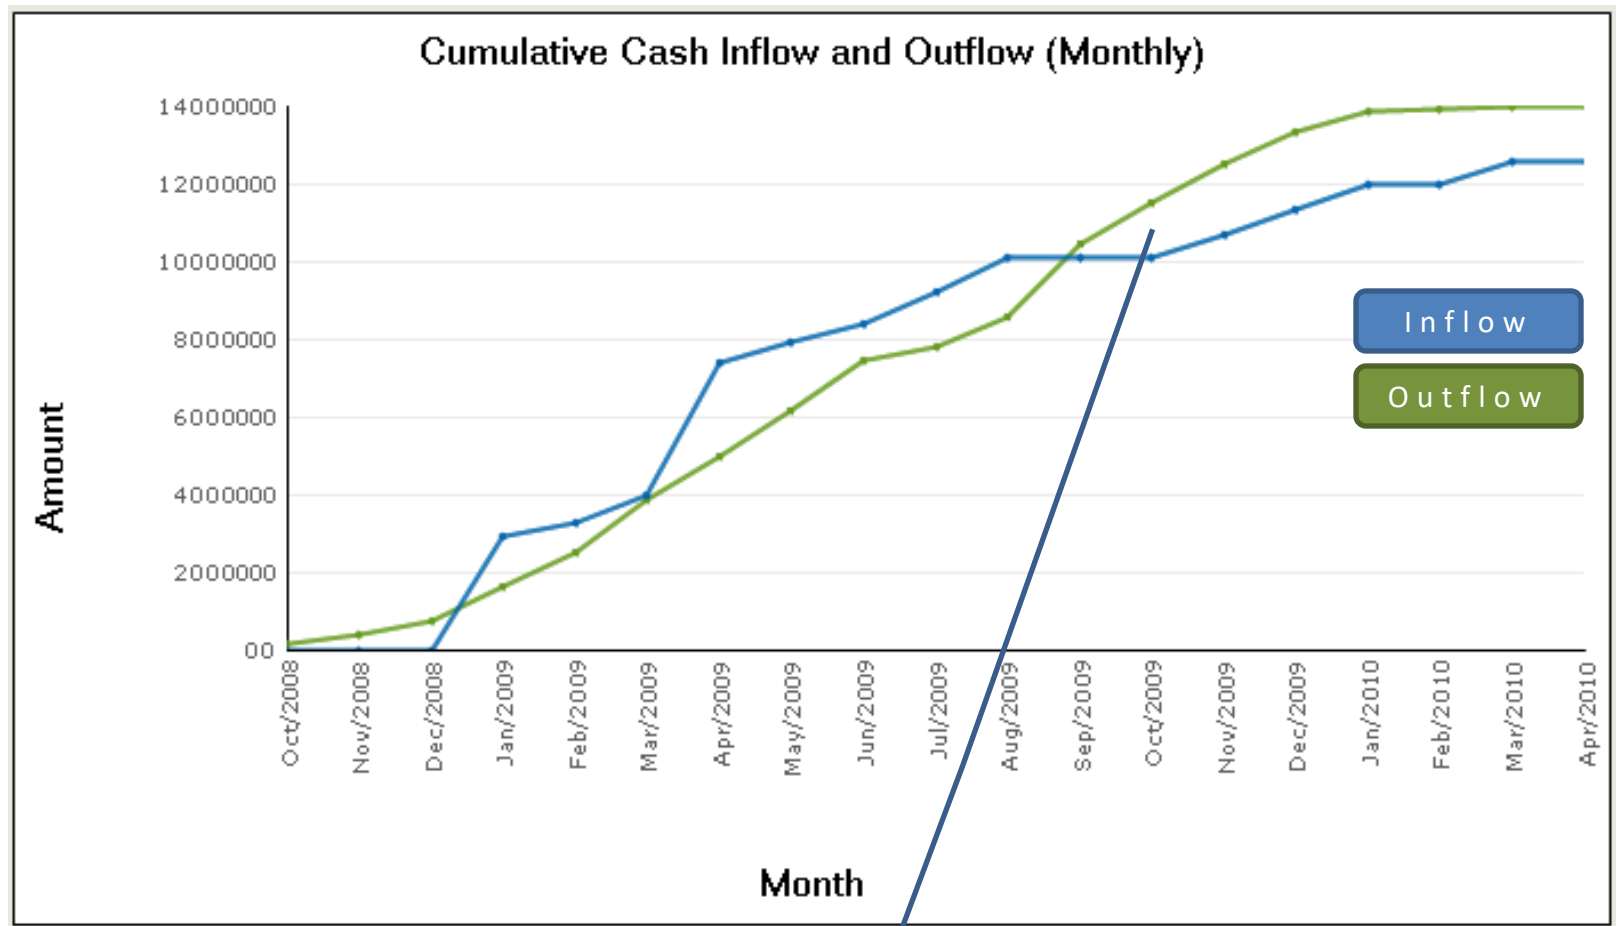

INFLOW AND OUTFLOW gives a projected status of all receivables (from Sales Installments) and all Expenses (Material/Labour Cost etc from Site) based on Estimation and workstage completion.

What if gives this report on basis projected sales or projected changes in time to complete workstages

	0	629000	629000	629000	0	629000	0
44	1084138.18	982121.47	849632.57	536523.9	58896.08	39256.59	0
0	10064000	10693000	11322000	11951000	11951000	12580000	12580000
1.02	11505300	12407511.47	12227144.04	12873667.84	12823564.02	12871020.61	12871020.61

Expenses (Cumulative) more than income in this period. Can a short term loan cover the shortfall given that after a sales installments can few months recover the position?

Design Approach of the software

Develop Core Functionalities

Build Flexibility

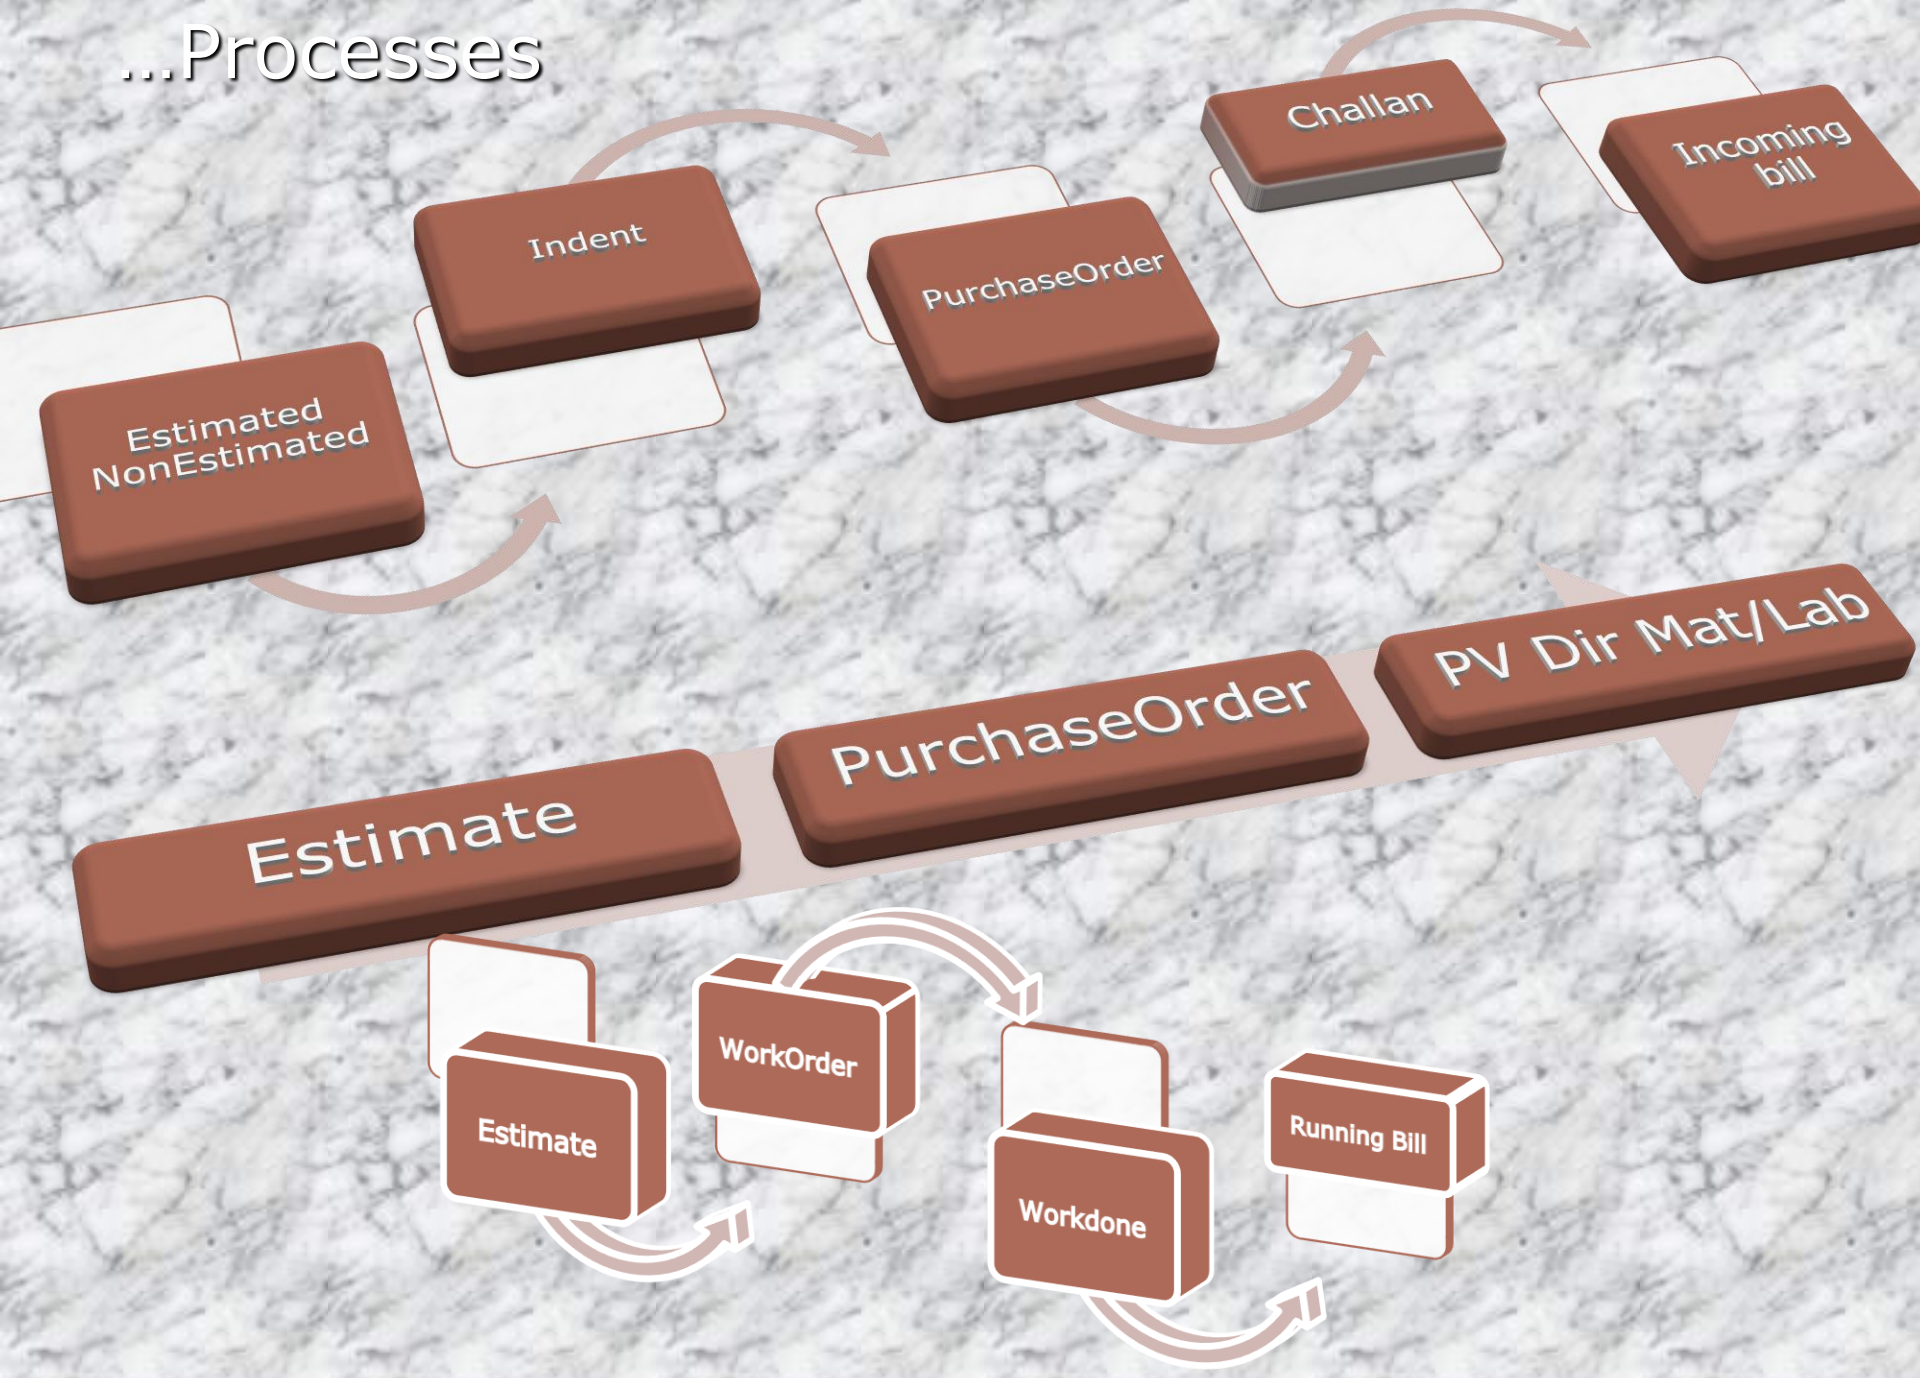

Test with live data

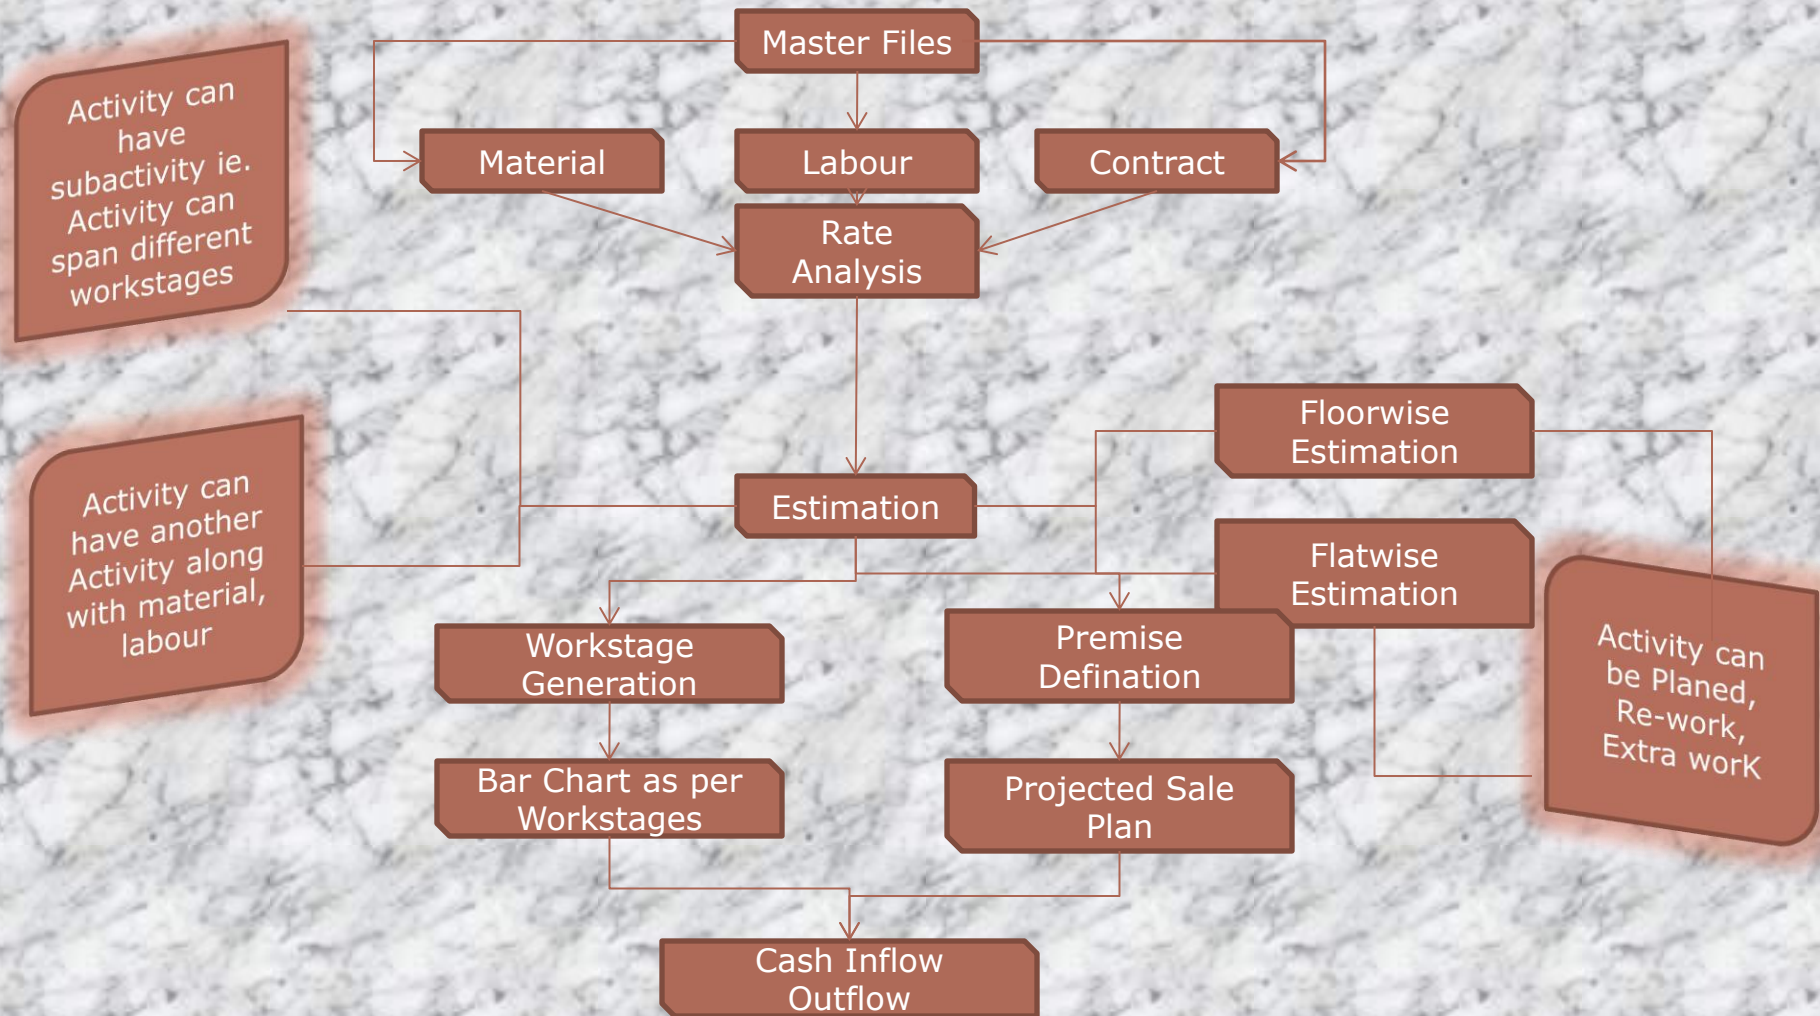

Additional Functionalities

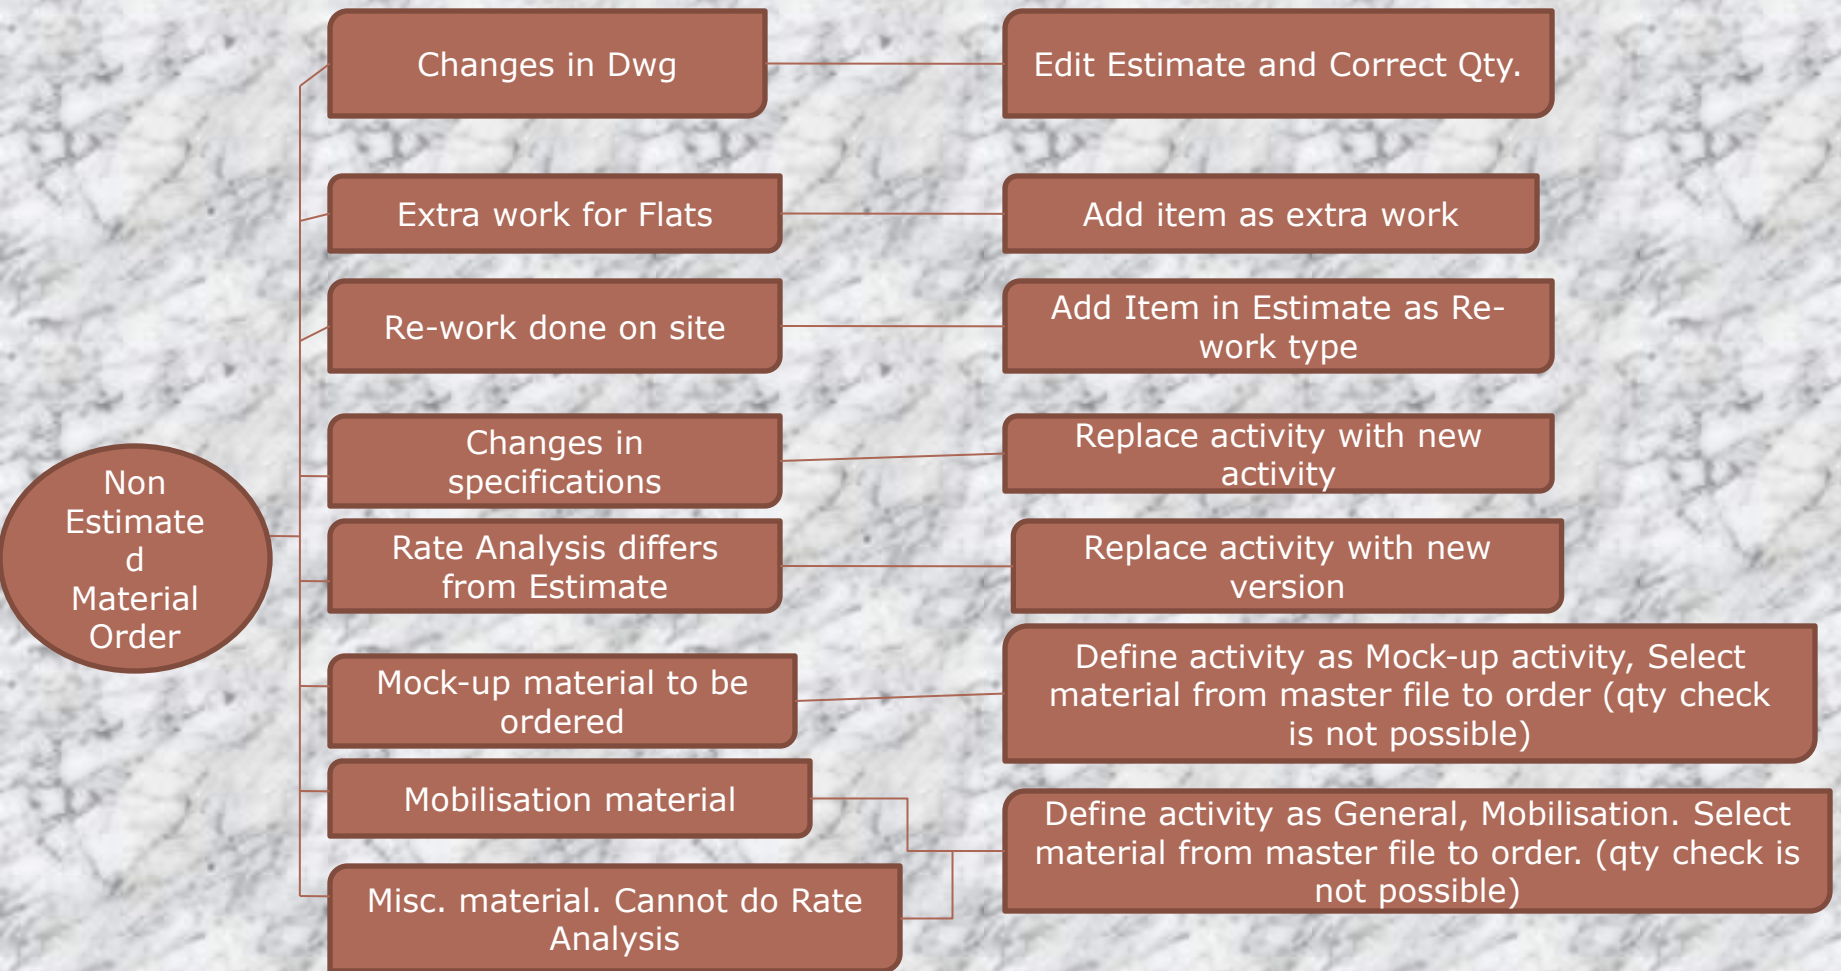

Data Entry Shortcuts

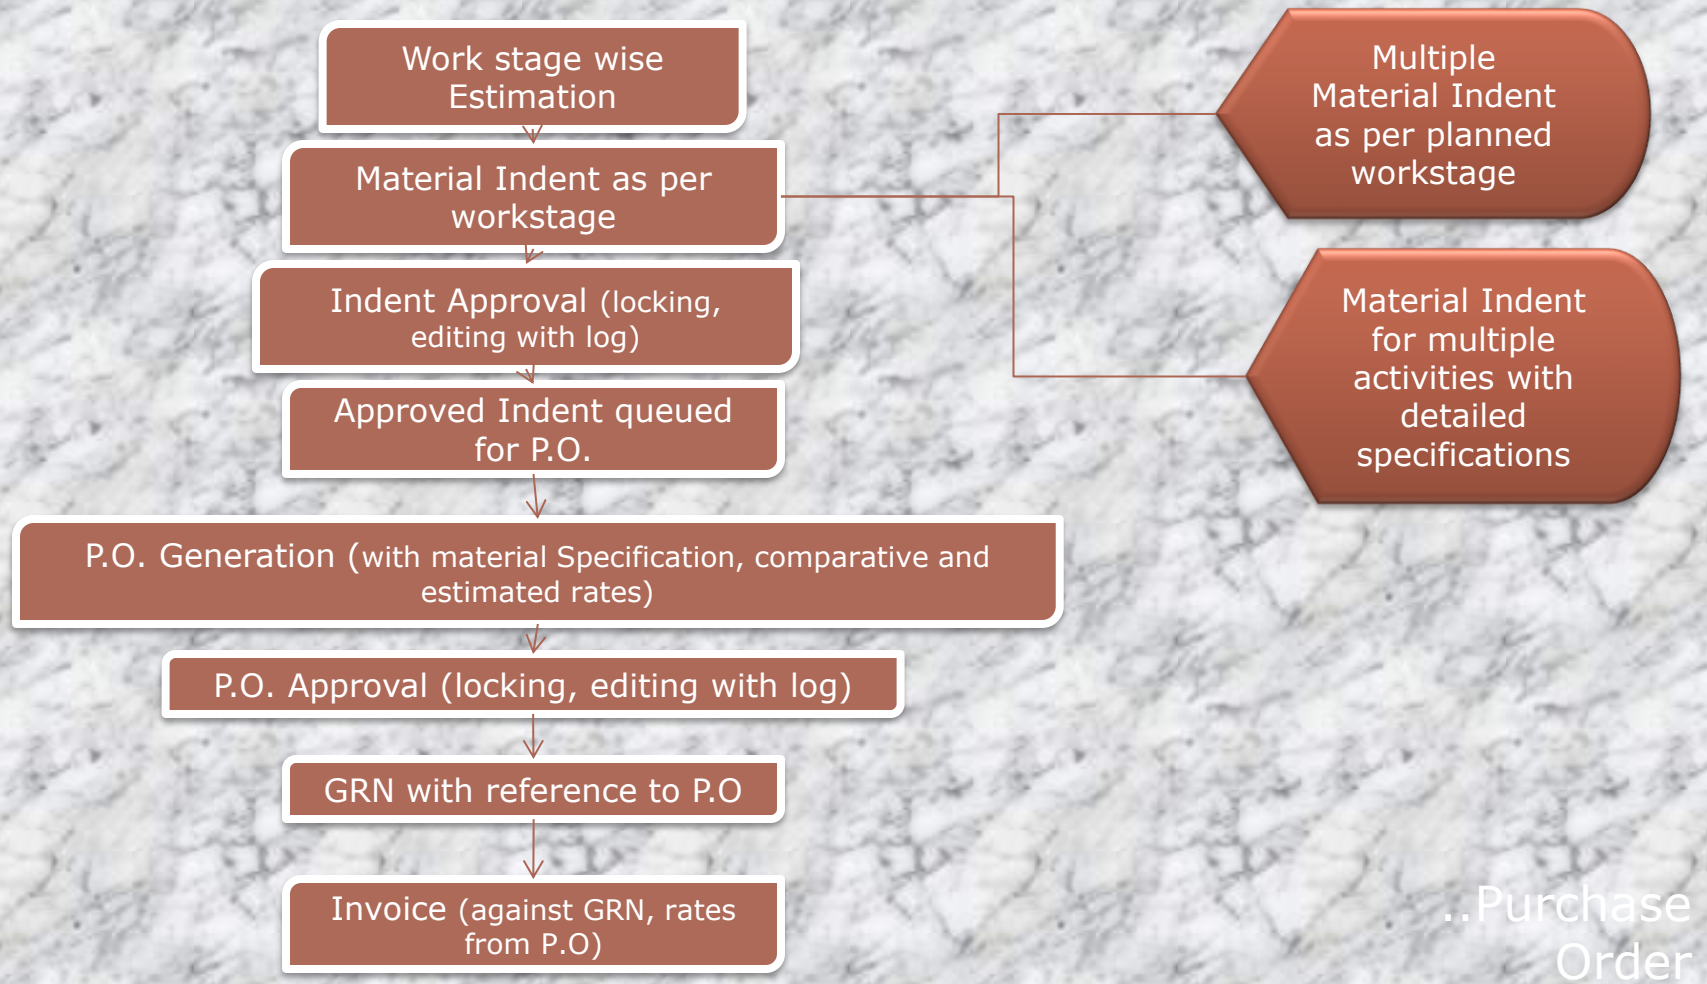

Look and Feel

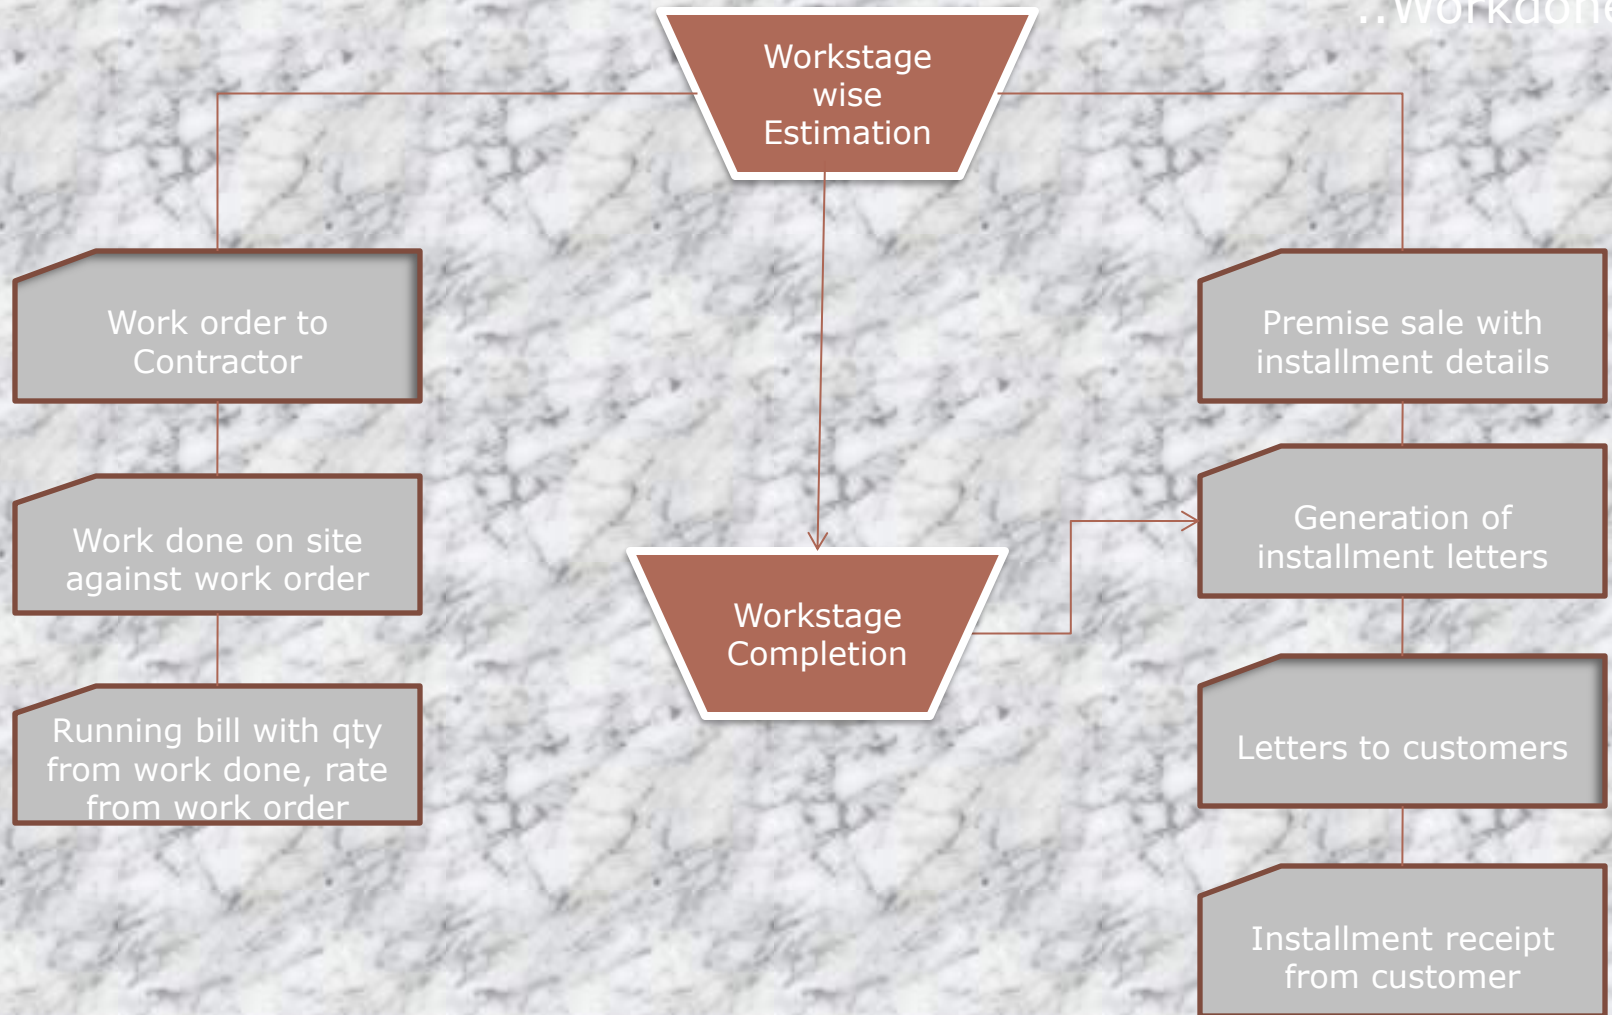

...Processes

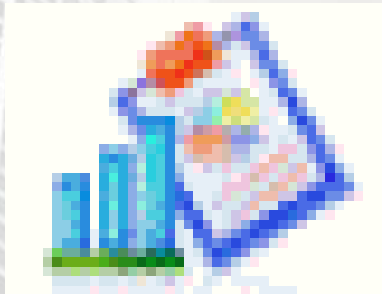

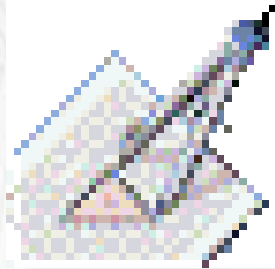

.....The Power of Estimation

- This process is ongoing – initially to have some base costs and as project is underway modifying adding and deleting activities to arrive at comparative versions of estimates

Buildingwise, Floorwise and Premisewise Estimation

Project Barchart for Workstages

Estimate Versions

Modifying Estimates

Measurement Sheet

Library of Items and labour

Activities Types and SubActivities

.....Site Activities

- In order to limit data entry work stages enable users to apply the data entry to the complete workstage:
- Indent for an item for complete Workstage

**Material Indent –
Estimated/NonEstimated Material**

Material Issues

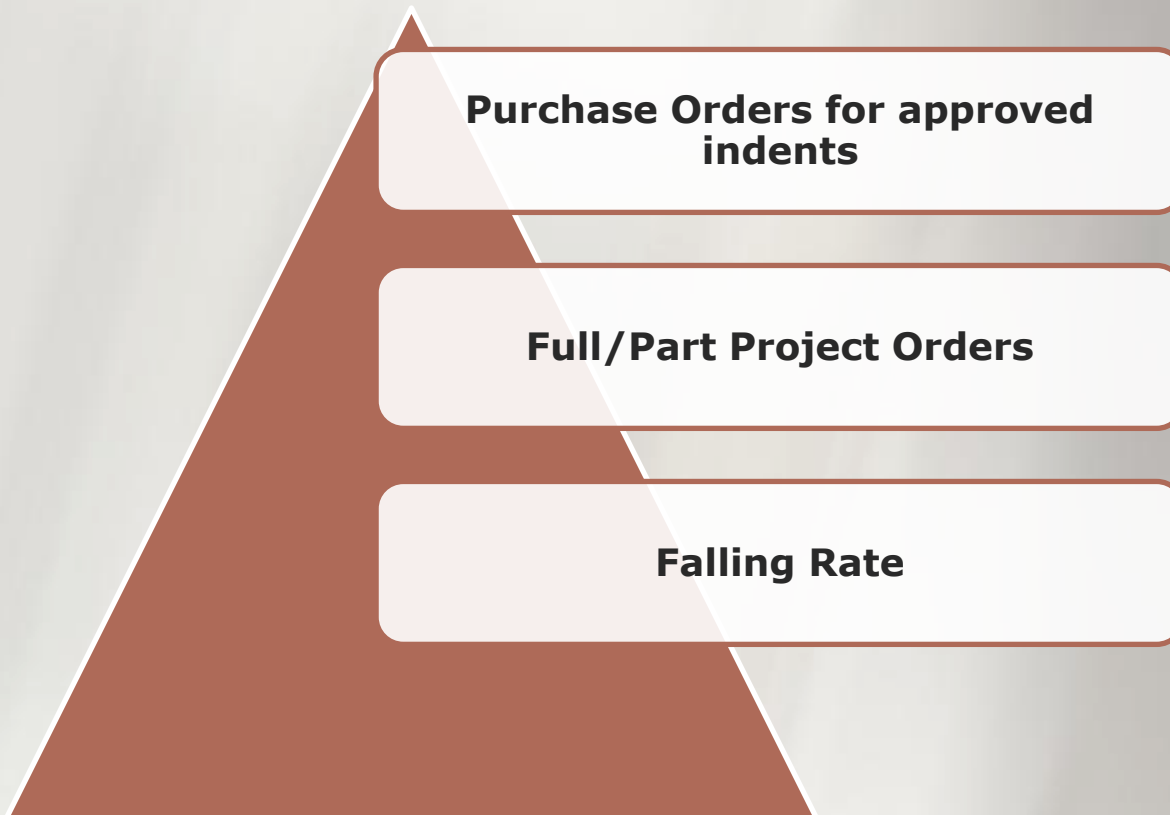

Work orders Workdone and Running bills

Stores/Multiple Stores

**Material Classification Inventory and
Control**

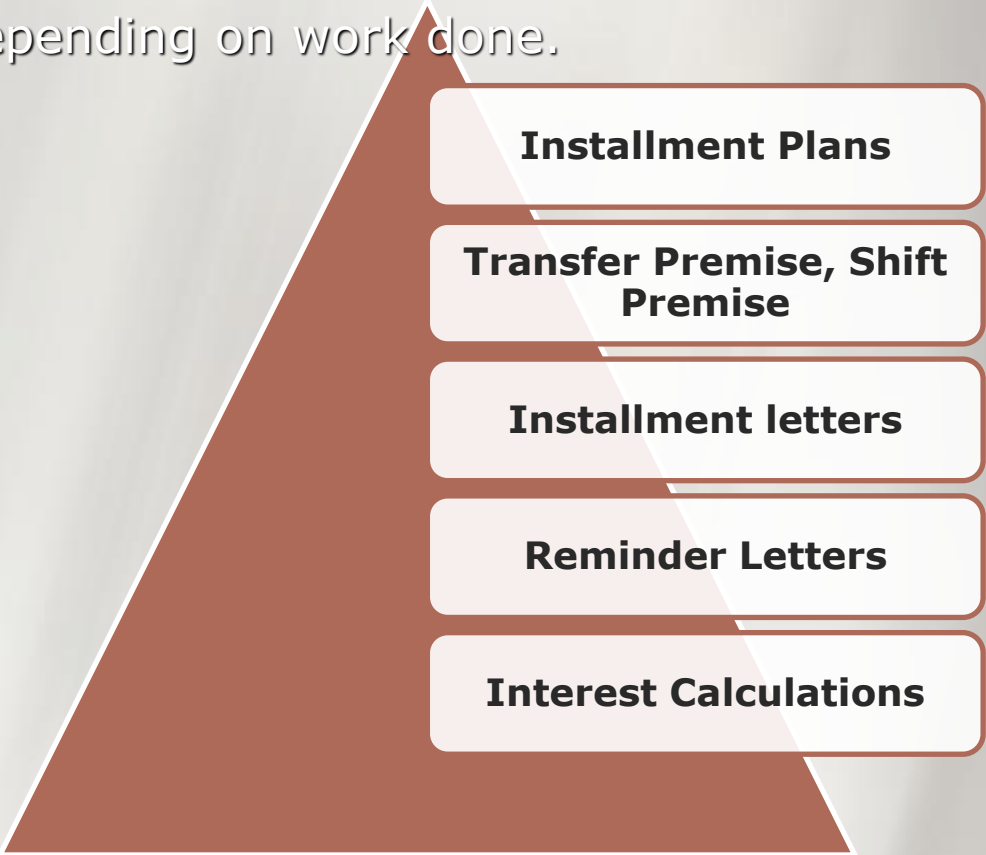

.....The Purchase Function

- Controlling Inventory and comparing rates
- Approved indents are queued for Purchase well in time before work starts (depending on lead time for delivery)

The Sales Angle...

- Sales can be based on Standard Installment Plan, Special Installment Plan for a Premise.
- Installment due dates can be arrived at automatically by the system depending on work done.

Installment Plans

**Transfer Premise, Shift
Premise**

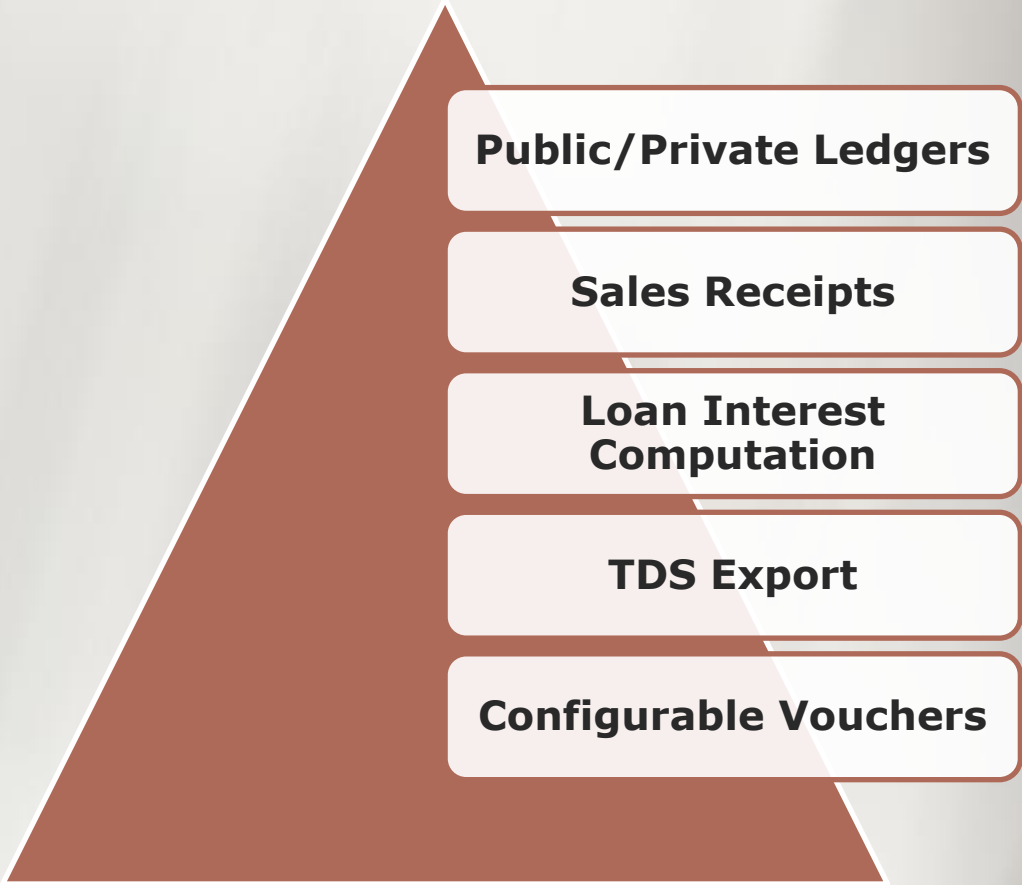

Installment letters

Reminder Letters

Interest Calculations

Accounting....

- Implementation of Sales booking
- Society accounting as a subproject.

Public/Private Ledgers

Sales Receipts

**Loan Interest
Computation**

TDS Export

Configurable Vouchers

Balance Project cost.....

- Bills keep coming months after the supplies are made...

Process	Example	
Balance Work to be done:		
Estimated qty.-Work Done	Balance work cost as per market rate	120,419,233.46
qty.=Balance qty. X market rate		
escalation 5 %	escalation 5 %	6,020,961.67
overheads 10%	overheads 10%	12,041,923.35
Total balance work cost	Total balance work cost	138,482,118.48
Retention amount to be paid	Add Contractors retention amount	3,958,257.00
RA bill entered- not paid	unpaid RA Bills	400000.00
Work Done – RA bill not made	Add work done ,but unbilled amt	1,050,000.00
Material received on site Bill not received-amt on per challan amount	challan amount	3000000.00
Material Received on site-Bill received but not paid	Add Suppliers outstanding payment(13/11/08)	35,00,000.00
PO-(Advance + Paid Bill)=Bal	PO-(Advance + Paid Bill)=Bal amt to be paid(lift, generator, fire fighting, etc.)	1000000.00
Unpaid CV's for site overheads	Unpaid CV's for site overheads	500000.00
	total	151890375.40
Balance material amt. on site X market rate	Less balance material on site cost	-17,735,107.00
	Net balance cost	134155268.40

Currently design for this is in process!!

Target rate along with Project Escalation

Balance Target Qty X Market Rate

Material code	Material Description	U.O.M	Estimated Qty	Estimated rate	Balanced target Qty.	Target Rate	Target Value	Market Rate	Market value	Project cost +Up - Less
M0101	Cement	Bag	100.00	171.00	50.00	182.00	9100.00	175.00	8750.00	350.00

■ In this case

- (A) Estimate of 100 bags @Rs.171 = Rs. 17,100
- (B) Activity Completed 10 bags @ Rs. 171 = Rs.1710 (work done)
- Received (A) 40 bags @ Rs. 160 = Rs. 6400
- Stock 10 bags @ Rs. 160 = Rs. 1600

Project saving on Cement Rs. 350.00

Market Value - Target Value

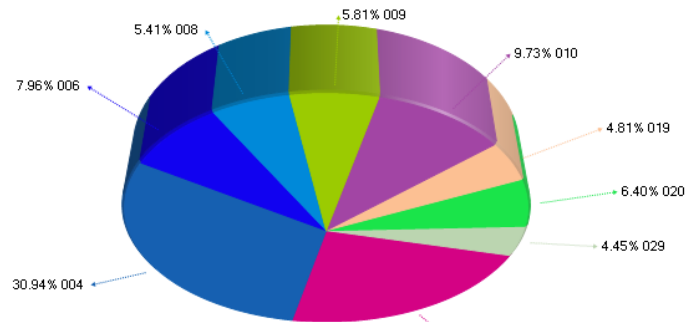

Thus, **actual material used** (50-40) = 10 Bags @ Rs. 160 = **Rs. 1600.00**

Now **balance target Qty** will be 100-10 = 90 - 40 (Stock) = **50 Bags**

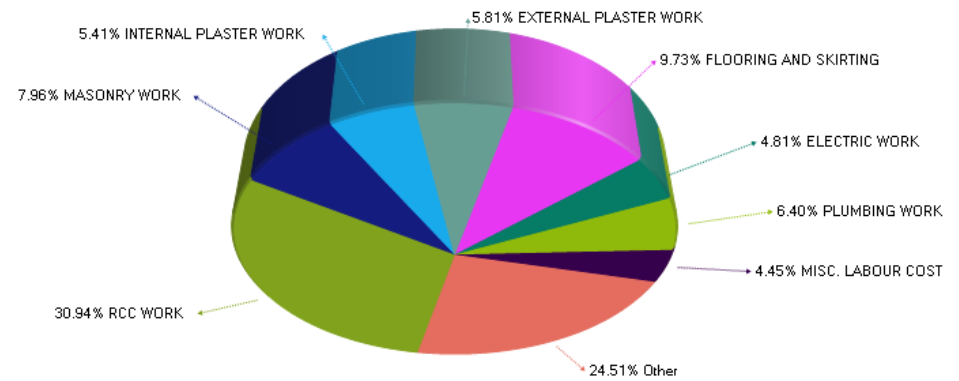

Target value = Estimated - Actual Purchases = 17100-8000 = **Rs. 9100.00**

Target Rate = Target value/Target Qty = 9100/50 = **Rs.182.00**

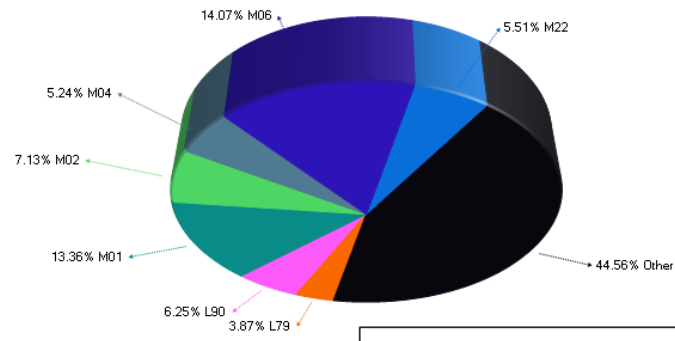

Activity Cost Distribution To Total Cost(ParkView-Wing11)

DETAILS

Estimation: - process

- Create Entity
- Create Project
- Create Subproject and define its schedule of installments
- Define Premises for the subproject
- **Generate Work stages by applying a template**
- **Define Project planning**
- Link installments with work-stages
- **Generate bar chart**
- **Define Tentative Estimate**
- Details to Floors and Premises
- Planned, Rework, Extra Work, Un-Planned Activities
- **Quantity Surveying**
- Define mapping between Work stages and Activities defined in Final Estimation
- **Cash-outflow report**
- **Cash inflow report**
- Copy Tentative Estimate to Final Estimate & Lock Tentative Estimate

Indents.....

- Against Final Estimate
- *Types of Indents*
 - **Activity-wise** : based on work-stages
 - **Material-wise**: - splitting of quantity into specifications
 - **Un-Estimated** materials
- *Approval of Indent* : workflow
- *Quantity checked against estimate*
- *Double ordering not allowed.*

Classification of Items

Cl as s	Issus entered in system to activity?	How Consumption is calculated	Examples	Get Qty from
A	Yes	Qty Issued	Cement, Tiles, CP Fitting, Sanitary wares, door fittings (locks) etc, Items issued for Flats	Issues
B	No	Qty Received Less Balance at Site	Sand, Aggregate, Bricks	Challans, Stock On Hand
C	No	Qty Received	all low cost items e.g. tapes, nails, screws, hardware, adhesives etc	Challans

Process of Purchase Order: -

- Types of Purchase Orders

- **Material P.O. Against Indents: -**

- Quantity checked against indent.
 - Rate picked up from either rate card or previous PO or latest purchase rate.
 - Specifications picked up from Indents.
 - Transport supplier/rate asked separately.

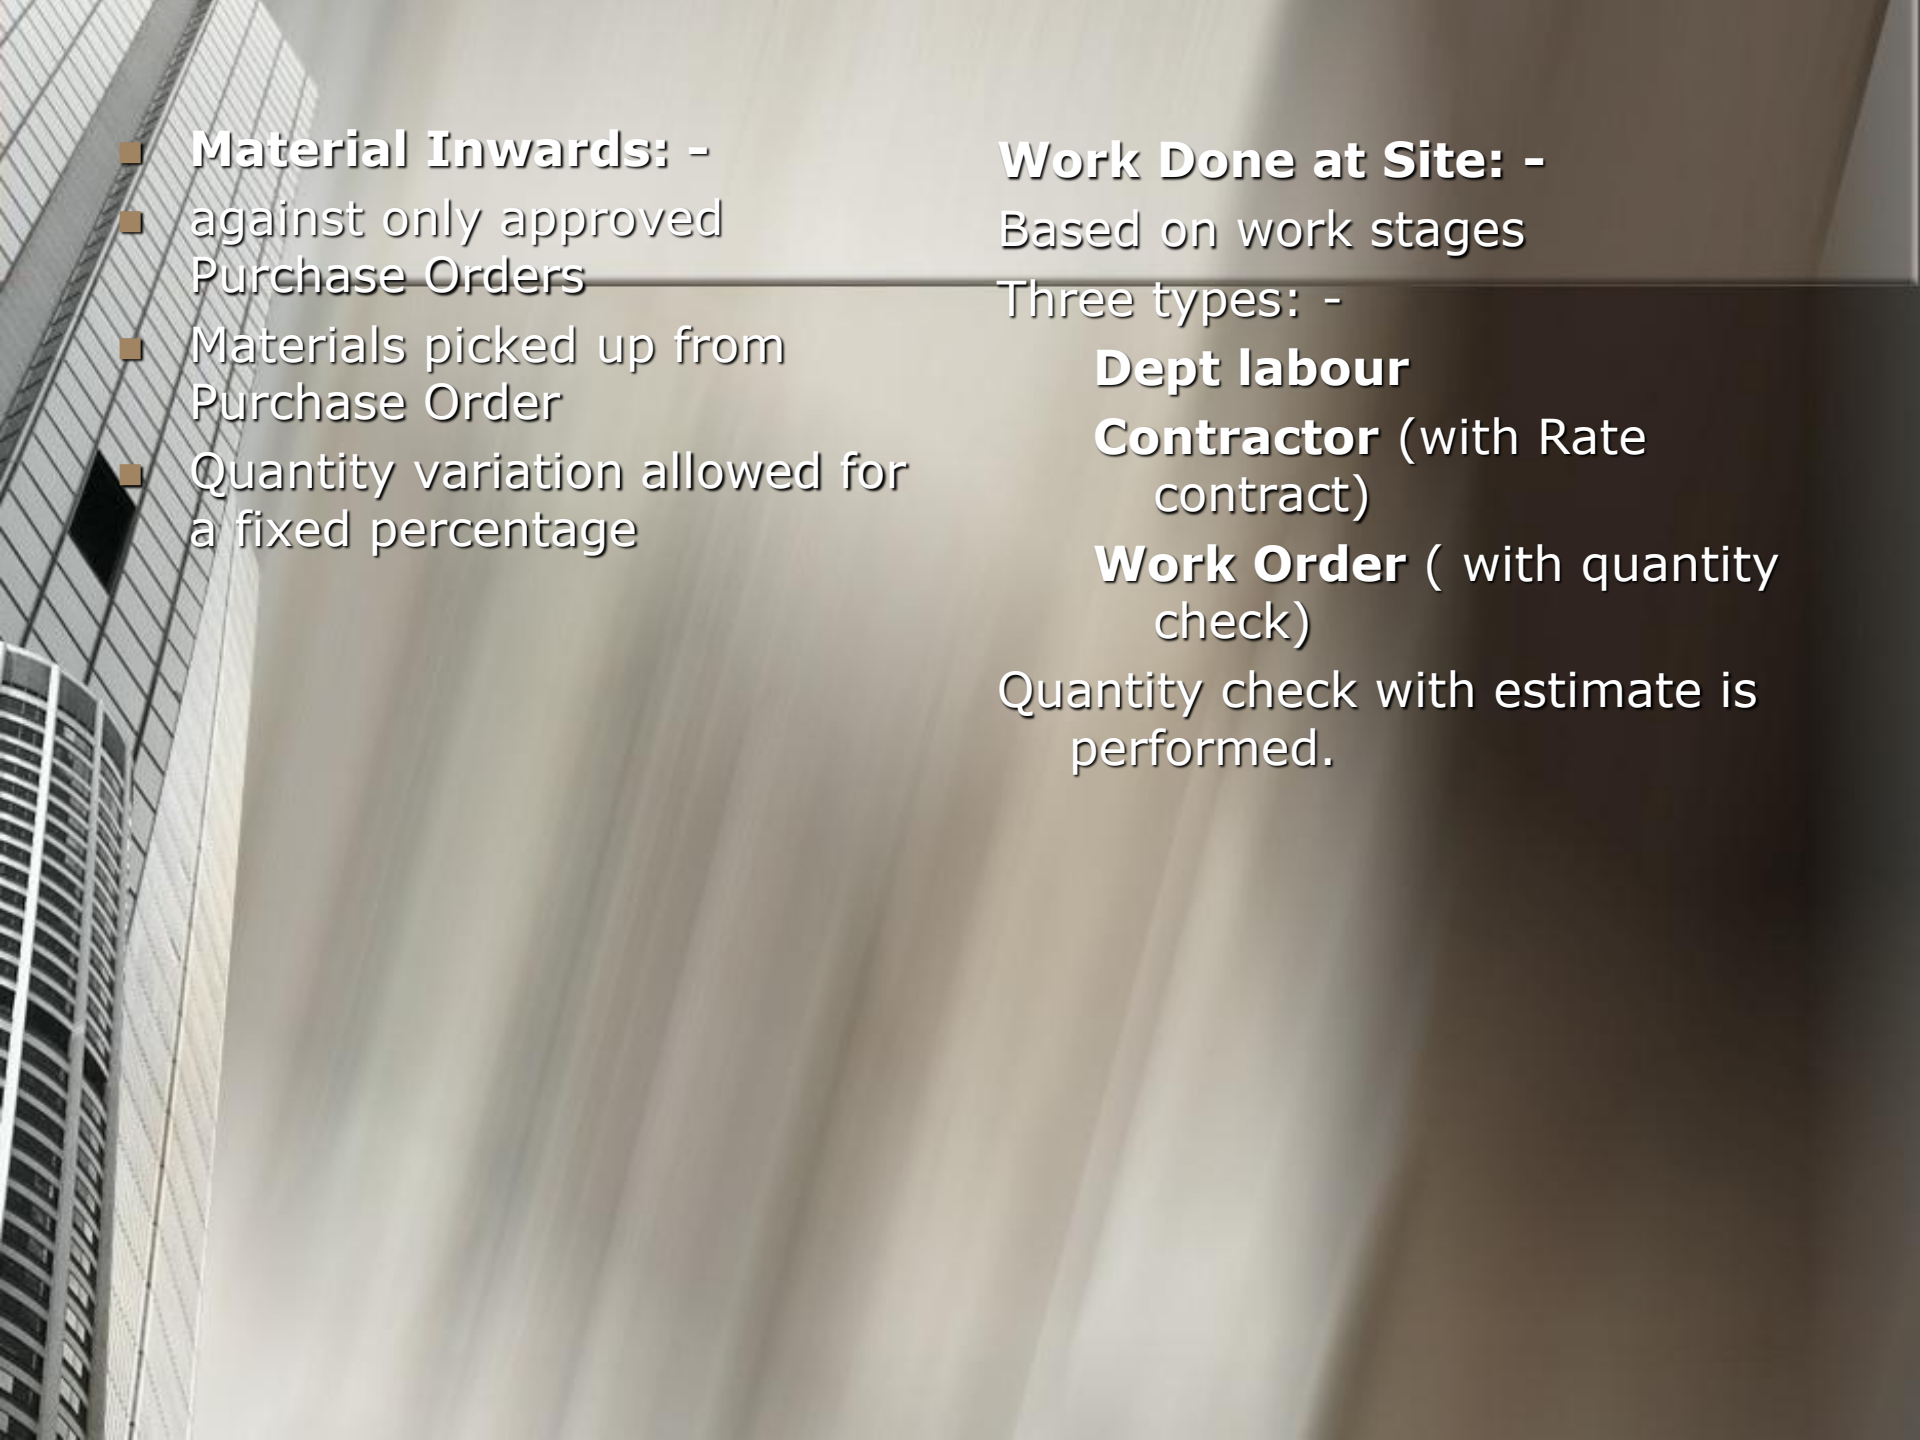

- **Work-order: -** For contracted items or labours. Quantity checked against estimate.

- **Rate Contract: -** Rate list of supplier of materials/labours.

- *Approval of Purchase Orders: workflow*

- *Printing: Along with Annexure of specifications.*

The screenshot shows a web-based Purchase Order (PO) form. At the top, it says 'Items marked with (*) are compulsory'. The form is divided into several sections: 'PO Header' with fields for PO No., Date, PO Type, Project Name, Sub Project Name, Supplier Name, Kind Attention, Delivery Date, Reference No., and Reference Date. Below this is a 'Details' table with columns for Item, Quantity, UOM, Unit Rate, Amount, Remark, and Action. A single row is visible with item 'L7502811', quantity '9.940001', unit 'hour', unit rate '700', amount '6958.0', and a 'Select' action. To the right of the table, there's a 'Total Amount' field showing '6958.0'. Below the table is an 'ADD ON' section with a table for 'Add Lines' containing columns for 'Rate', 'Percentage to', 'Amount', and 'PL Actual'. Two rows are shown: 'ADD WCT' and 'LESS TDS of Contractor'. At the bottom, there are fields for 'Payment Term and Condition' and 'Remark'.

- 
- **Material Inwards: -**
 - against only approved Purchase Orders
 - Materials picked up from Purchase Order
 - Quantity variation allowed for a fixed percentage

Work Done at Site: -

Based on work stages

Three types: -

Dept labour

Contractor (with Rate contract)

Work Order (with quantity check)

Quantity check with estimate is performed.

- **Purchase Vouchers: -**
- **Types of Purchase Vouchers:**
 -

Material/ Labour PV

against daily report : -

Quantity picked up from
challan

Rate picked up from
Purchase Order

Add-ons (Taxes) picked
up from Purchase
Order

Calculation of Effective
falling rate

**Direct Labour
,Material,Work Done**

**Transport PV against
material PV : -** Check of
total amount against
Purchase Order

Supplementary PV:

Running Bills: -

Pick up work done from site

Types of running bills: -

Against Dept labour:

Against Work Order: picks up
rate from work order and
quantity from work done
against work order

Against Contractor's rate

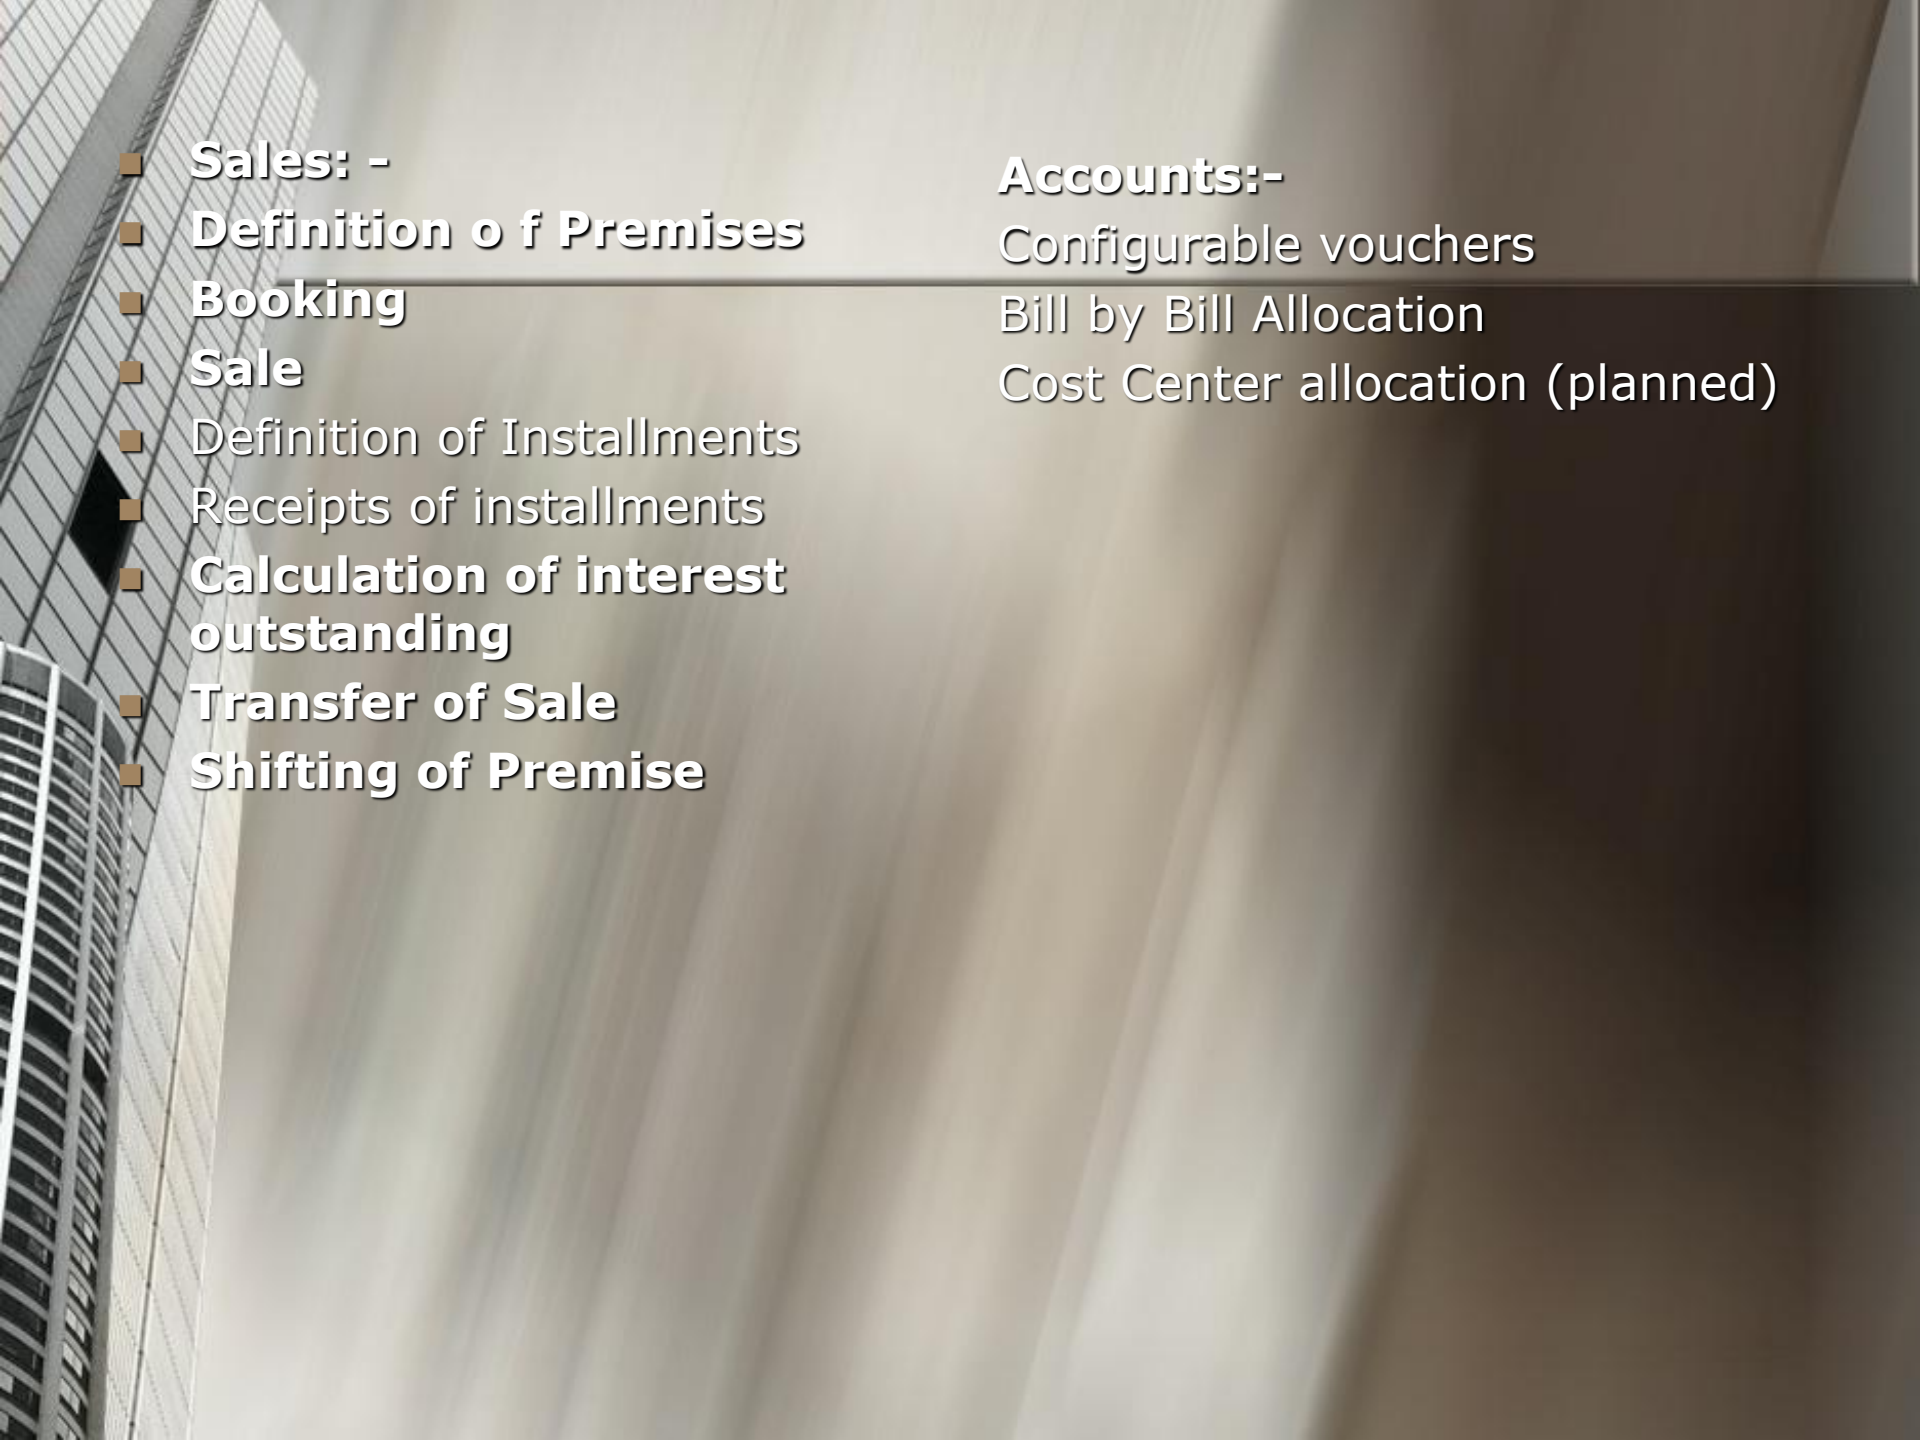

contract: picks up rate
from rate contract and
quantity from work done
against contractor

Lumpsum basis -

Miscellaneous/lump-sum
activity from project and
labours from master.

Quantity and rate
manually typed by user.

Rate picked up from either work

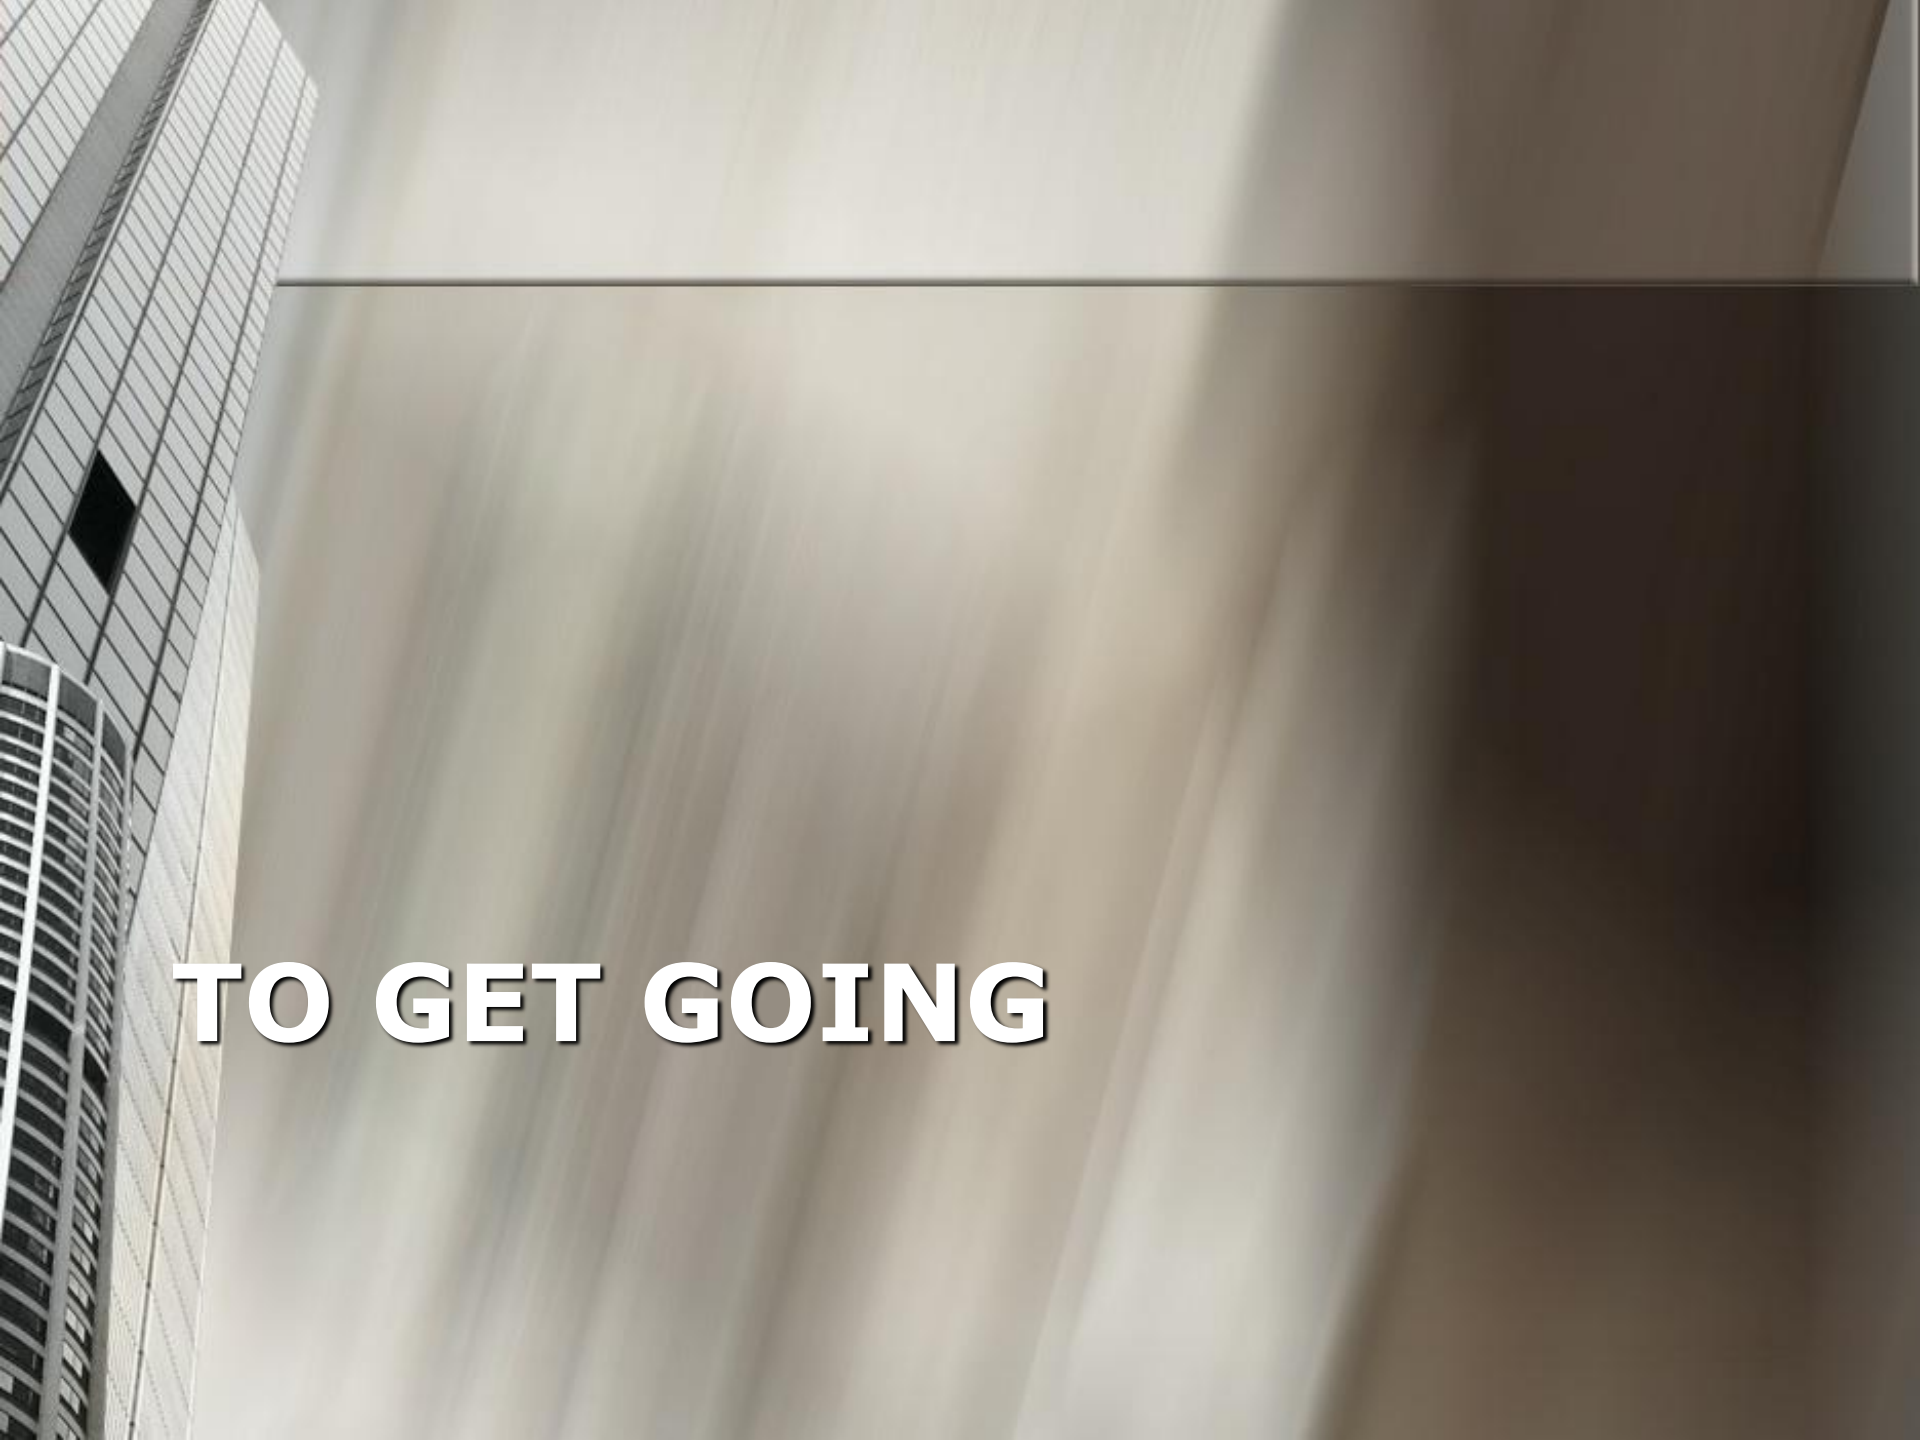

- 
- **Sales: -**
 - **Definition o f Premises**
 - **Booking**
 - **Sale**
 - Definition of Installments
 - Receipts of installments
 - **Calculation of interest outstanding**
 - **Transfer of Sale**
 - **Shifting of Premise**

Accounts:-

Cost Center allocation (planned)

TO GET GOING

Getting Started1

- Works entirely through a web browser.
- No separate installation at user PC's
- Troubleshooting can be done remotely
- Hardware requirements:
- Software requirements:
 - MS windows
 - MS Office
 - Acrobat reader
 - IT support Staff

Getting Started2

- Configuration
- User Training:
- Generation of Masters
- Items – Groups and items
- Account Groups
- Accounts Ledgers with Opening Balances

Getting Started3

- Gap Analysis
- New Reports
- Modification of Process, testing and going online

What is expected....Next Version
